

Rational® Quality Manager Advanced Topics

WEB INTERFACE ■ RQM VERSION 6.0.3

ID: RQM-ADV-WEB-603

Overview

This half-day, hands-on class covers selected advanced Rational Quality Manager topics.

Audience

- RQM administrators, advanced users, and automated script creators.

Prerequisites

- Basic knowledge of software testing process and terminology is helpful.
- Island Training's *RQM Test Authoring and Planning* class or equivalent experience.

Objectives

At the end of this course, students will be able to use Rational Quality Manager to create new iterations, create custom attributes, create the framework for automated command line test scripts, and synchronize RTC build information to RQM.

Outline

Timelines	View timelines and iterations, create iterations
Custom Attributes	Create custom attributes for test artifacts
Command Line Adapter Setup	Start the RQM Command Line Adapter
Create Command Line Test Script	Create a command line test script
Run Command Line Test Script	Create RQM test script using command line adapter, test case, and test case execution record; run test case execution record
Command Line Test Script Variables	Create command line test script using variables passed in from test case
Command Line Test Script Attachments	Create command line test script that will attach files and links to result details
Build Provider	Synchronize build information from RTC
