
UCM Intermediate for Unix

Overview

This half-day, hands-on course is designed for project leaders and advanced UCM users who are responsible for creating and maintaining the UCM developer environment. Topics include:

- Project startup,
- Inter-project delivers, and
- Advanced UCM features.

Power users should refer to the *Curriculum Overview* for other courses in the UCM and UCM/ClearQuest Integration tracks.

Prerequisites

UCM Fundamentals course or *UCM/ClearQuest Integration Fundamentals* course.

Objectives

At the end of this course, students will understand UCM concepts as they relate to creating and managing the UCM development process. They will be able to create and maintain a typical UCM work environment.

Outline

Baselines	Creating project baselines
Baseline Multi	Operating baselines in multi-component projects
Foundation baselines	Understanding and changing a stream's foundation baselines
Composite basics	Understanding composite baselines
Composite use	Using composite baselines
Inter-project delivers	Using the Deliver tool to promote code to alternate streams
Project startup	Getting a UCM project off the ground
